Overview

ATMIT Purchase Management module is a powerful tool to track and create your purchase orders from start to finish. It enables you to manage your suppliers' information, controls your products' reception process and check suppliers' invoices.

This module carries out complex purchasing procedures and allows you to easily request services.

General Features

- Web-based
- More secure connection using SSL protocol
- Multi-language: Arabic, English & others
- Multi-Currency
- Multi-company & Branches
- User friendly

Purchasing Management System Features

- Convert request for quotations, orders, and invoices to PDF format for easy sharing.
- Providing critical information for the Annual Purchase Forecast to improve your future purchasing decision.
- Monitoring invoices and tracking the receipt of ordered goods.
- Ability to request a quotation with all the information needed in addition to the shipment, payment, and packaging information.
- Ability to easily search and import materials from your sales orders to your purchase quotation.
- Streamline the quotation with the material category and product's specifications: width, color, weight, discount, net price...

- Segmenting geographical areas: suppliers in a specific area are grouped under the responsibility of one or group of employees. Segmentation can be done by supplier, material category and product category. This configuration is reflected to the XRM module.

- Reporting transactions can be done according to the filters narrowing your searched report and making it more specific (date, country, materials...).
- Tracking orders: to track each invoice from which order is generated.
- The ability to view the number of orders that have been generated from a specific quotation.
- Comparing transactions: viewing details of materials, source of purchase, quantity purchased, ordered and invoiced.
- The ability to filter invoices by type, payment methods, supplier, warehouse...
- The capacity of tracking materials' movement: most and least purchased material.
- Comparing the purchased materials' price: highest and lowest price by supplier.
- Evaluating the performance of the procurement executives.
- The Module can be linked to Accounting, XRM and Manufacturing Module in Atmit Enterprise.
